# Roller Guides

Provides a Smoother, Quieter Ride

Ride quality is important. If the elevator bumps, rumbles or vibrates, passengers' comfort and safety expectations may cause a negative impression of the building or its management. Many times, the only solution to vibration or noise is roller guide replacement. Vertical Express roller guides will give your elevators a smoother, quieter ride.

Our roller guide systems provide consistent, unified pressure and are designed to absorb vibration and excessive movement due to varied alignment issues on both car and counterweight rails. With quick installation and easy adjustments, Vertical Express roller guides will improve ride quality to a level expected by today's customer standards.
